

Student Addition

Laptop-compatible Reading and Distance Camera

For mobile students and professionals, the Student Addition is a laptop-compatible or PC-compatible reading and distance magnification camera. The camera is easily mounted onto a pedestal base in seconds, only requires one USB 2.0 connection to the computer, then launch the navigation program, and you're ready to begin reading and distance viewing. Student is stable and well-balanced when set up and operating, and built of sturdy yet attractive metal for secure portability while weighing under 3 pounds.

Magnify from 2x - 60x on a 17" monitor. Student displays the sharpest flicker-free image of any distance magnification camera via its 60 frames per second refresh rate. All display functions are operated from easy to recall hot keys or task bar icons. Student's camera conveniently flips between reading and distance images, and its arm swivels 360 degrees for distance viewing. Its intelligent camera automatically recalls user preferences, like the magnification and image mode settings, when it is switched between reading or distance viewing.

It can capture and store multiple images or even record a short video in a classroom or office meeting room. Student is Windows and Vista compatible, as well as ZoomText computer screen magnification software compatible including picture-in-picture split screen displays. As a dedicated desktop video magnification camera, the Student includes both a standard 15-pin VGA video output port and a RCA TV video output connector for display to almost any PC or TV monitor. Direct monitor connectivity is a feature not available on most other laptop-compatible magnification cameras.

Student offers free online software updates within version, as well as a two-year manufacturer's parts and labor warranty on hardware.
